

I have been an XM Satellite radio subscriber since XM's inception. I am one of the millions of subscribers who enjoys the commercial free service. Not only do I enjoy XM's commercial free service, but also value the variety they offer. Ever since weather and traffic was added the service has got better. I pay XM a fee and expect to receive great service-which i have been, for XM to stop transmitting valuable traffic and weather would be a disservice to the company and the public. I agree with XM and with millions of other people that we should have a right to get what we pay for and also not to mention our first amendment right. WE have made great leaps forward with continuous innovative services and products, lets not go backwards now. Please keep XM Alive.
